

The International Council for Scientific and Technical Information (ICSTI) presents:

From Information to Innovation has been chosen as the main theme of the 2010 ICSTI Conference. The significance of information as the enabler and catalyst for scientific, technical and business developments will be discussed. Elements of success in building the future will be highlighted.

There are three special sub-themes:

- Information as the lifeblood of research and innovation
- Intelligent information solutions and services
- Creating the future - towards the global innovation economy

A capstone of the conference will be the launch of a Multilingual WorldWideScience.org.

A banner for WorldWideScience.org. It features a globe on the left, a world map in the background, and the text "WORLDWIDESCIENCE.ORG" in large white letters on a red background. Below it, it says "The Global Science Gateway". The Microsoft logo is in the top right corner. The text "Extending Global Reach" is at the top left, and "Through Multilingual Translation" is at the bottom right.

Extending Global Reach

Microsoft

WORLDWIDESCIENCE.ORG
The Global Science Gateway

Through Multilingual Translation

Enables speakers of any language to search science databases from countries such as the U.S., Russia, China, and Japan regardless of the language of the query, or language of the response. **Search 60 databases and portals in WorldWideScience.org in over 60 countries and numerous native languages** and have results translated into the language of the inquiry. See this innovation demonstrated on 11 June in Helsinki.
